

Nate Jackman

Senior Web Developer

natejackman@gmail.com

Summary

I'm a professional web developer with expertise in JavaScript and full-stack development. I've worked on teams for many large enterprise clients such as Under Armour, Nike, Microsoft. In addition, I have worked with startups and smaller shops to create solutions based on their needs, greenfield projects, highly speced code, and working with business and clients to provide successful solutions.

Until recently, I worked with Twin Technologies, a technology consulting firm focused on delivering high quality solutions to Fortune 500 clients. In this role I was focused on working with teams at Under Armour to provide solutions to business requirements, ranging from custom front-end implementations, CMS modifications, to micro service creation. Successes included creating custom reusable cms tools and widgets that allow dynamic creation of full pages and building out an extensive well tested api to be consumed by any platform.

Colleagues know me as a highly talented developer who can always be trusted to reliably provide work displaying craftsmanship and quality. My work shows I am passionate about the field and enjoy what I do.

I particularly love working with frontend technologies creating apps or custom design implementations. I am always staying up to date on the latest trends and ways to improve myself.

I have a B.S. degree in Management Information Systems from Indiana University.

I'm currently freelancing while I explore new opportunities and can be reached either through this profile or by phone at 574-276-5819.

Experience

Web Developer at Jackman Dev

July 2011 - Present (5 years)

As a freelance consultant I have worked on a wide range of interesting and challenging projects. During the projects, I work closely with clients, and remote development teams to deliver quality solutions.

Highlights: Single Page Apps (SPA), custom content management systems, highly crafted UI marketing experiences, blog integrations, emails, static build outs, full stack prototype creation.

Senior Web Developer at Twin Technologies, Inc.

June 2014 - April 2016 (1 year 11 months)

I was focused on working with teams at Under Armour to provide solutions to business requirements, ranging from custom front-end implementations, CMS modifications, to micro service creation.

Successes included creating custom reusable cms tools and widgets that allow dynamic creation of full pages and building out an extensive well tested api to be consumed by any platform.

Sr Web Developer at Nike

September 2013 - June 2014 (10 months)

I was responsible for working with business to create highly performant frontend UI components that can be customized and built in a CMS environment and used across the site.

Successes included creating dynamic module initialization framework, refactoring existing frontend components and CSS to accommodate improved UI terminates and elements, implementing new CMS widgets for authors to preview and create custom parts of web pages.

Lead Web Developer at 29th Drive

August 2011 - May 2013 (1 year 10 months)

I led the developer efforts across all projects. I worked closely with the designers throughout the creation process to help facilitate end deliverables and direction.

I worked on creating designer reviewed, pixel perfect projects such as, static builds of designs, ui kits, emails, wordpress, python integration. I was part of an effort to create a SaSS app, working a full stack to provide a revenue generating project.

Software Developer at Silveus Insurance Group, Inc.

July 2009 - August 2011 (2 years 2 months)

I was accountable for developing and executing business requests related to creating web and desktop applications for the three managed websites. I built custom desktop apps that agents utilized in the field to assist with sales.

Successes included creating highly performant cross browser web apps that can perform vital business tasks, porting hardcoded slow loading excel sheets into standalone apps and web apps that can be consumed and used by agents in the field and their clients, scripting slow, manual processes, to decrease required manpower on time consuming tasks.
